Serving Clients Since 2018

100+ Professionals 25+ Windchill Experts

200+ Years of Total Combined Windchill Experience

20+ Clients Across Globe

ptc partner network

A software service company enabling **Digital Transformation** through comprehensive **Windchill PLM Consulting,** strategic advisory & end-to-end implementation.

Our Services

Implementation
Our Quick Start Implementation Program is designed to accelerate your journey with PTC Windchill, enabling a seamless and efficient deployment. The **initial six-week phase** establishes a strong foundation for your Product Lifecycle Management (PLM) transformation. This is followed by a comprehensive Organizational Change Management program, including targeted training and ongoing support, to ensure successful adoption and sustained value realization.

Customization
We understand that every organization operates differently. That's why our services include powerful customizations to **align Windchill with your unique workflows**. From custom business rules and automated actions to event listeners and data utilities, we help you extend Windchill's capabilities to fit your exact needs.

Integration
We help integrate Windchill with a wide range of enterprise applications, including ERP, PPM, QMS, and CAD authoring tools. Depending on your requirements, we utilize standard PTC products like PTC ESI or develop and expose REST/SOAP web services to **enable seamless data exchange** with other systems.

Data Migration
We leverage custom extractors or Windchill Bulk Migrator, depending on your specific needs to ensure efficient and accurate data migration. Our team can migrate data from PDM systems, other PLM platforms, ERP solutions, or virtually any enterprise system. Through thorough rehearsal migrations and data cleansing, we **ensure a smooth, reliable, and disruption-free transition**.

Version Upgrade
Whether it's a **minor patch deployment or a major version upgrade**, our experienced team is here to support you every step of the way. From platform migrations such as Windows to Linux—to infrastructure transitions between on-premise and private cloud environments (or vice versa), we have the expertise to ensure a smooth and successful transformation.

QA Services
As you evolve your Windchill PLM system through customizations, integrations, data migrations, or routine maintenance like patch updates, ensuring system stability and performance is critical. That's where our dedicated Windchill QA services come in. Our testing team, **trained specifically on Windchill,** offers both manual and automated testing to validate every change and minimize risk. Already have a QA strategy in place? Great, we'll align with it seamlessly. If not, we'll partner with your IT team to design and implement a tailored QA strategy that ensures long-term success.

Case Studies

Customer	Project		Duration
North American heritage brand in floor cleaning appliances	**Managed Services (L2 & L3 support)**	● Manage PLM Systems – Uptime, backups, rehost, upgrades, integrations, support ● Windchill consulting, enhancements solutioning, implementations, deployments ● Thingworx Navigate enablement, custom navigate apps, application management	2022 till date (3 years ongoing)
German innovator in vertical transportation systems	**Windchill Data Migration**	● Migrating legacy CAD and Non-CAD data in Windchill Data preparation, cleaning up Solidworks files for ● number/version duplications Create mapping rules for CAD part lists, drawings, PDFs ● before performing ETL	2019–2020 (6 Months)
Global leader in home appliances	**ERP Integration**	● Set up Windchill ESI with SAP S/4 Hana for synchronized data integration ● Multiple SAP instances with Process Orchestrator (PO) as middleware ● Features: Part BOM, Plant-specific BOM, Config Spec, and Transaction management	2019–2020 (6 Months)
North American heritage brand in floor cleaning appliances	**Windchill Upgrade**	● Upgrade from Windchill 12.0.2 to 13.0.2 and migrate from on-premises to AWS ● Regenerate the custom build for deprecated APIs and unreferenced JARs ● Automation regression testing: execute 3 rehearsals and production	2024–2025 (10 Months)
